# 1 Summary

## Executive Summary of the Project

Goal

Maximize the Profit in Long-term Rent Business

Strategies

Differentiation – Business Model

Environment

Mobility: Car Sharing

Suggestion

**A New Business Model: Long-term Rent + Short-term Car Sharing**

Small Businesses

- Select a Car Model
- Make a Reservation

- Fixed Rental Fee
- Variable Rental Costs

Prediction Model

App & Web Page

# 2 Project Objective

Maximizing the Profit of KJ Rental

## Cost

### AJ Rent-a-car

Account	2016 Operating Expense	Percentage
Used Car Sales Cost	197,867,004	32.18%
Insurance	40,477,680	6.58%
Fee	30,175,839	4.91%
Vehicle Maintenance	40,201,358	6.54%
Depreciation Cost	229,335,403	37.29%
Sum	614,922,935	100.00%

Differentiation

# 3 Trend in Car Rental Market

## Environmental Analysis for New Business

### Prospect of Car Sharing Market

### Companies Focusing on Car Sharing Business

#### Car Manufacturing

KIA Motors

BMW

General Motors

Mercedes-Benz

#### New Companies

SOCAR

#### Other Business Sectors

Hyundai Capital

# 3 Customer & Competitor Analysis

Environmental Analysis for New Business

## Customer Analysis

Small Businesses

Cost Sensitive

## Competitor Analysis

롯데렌터카

SK 렌터카

AJ 렌터카

Rent-a-car Companies

Car Sharing Market

# 4 Suggestion

Business Model Explanation

Fixed Earning

Variable Earning

Select a car model

Make a reservation

# 4 Suggestion

## Business Model Explanation

Fixed Earning

Variable Earning

Companies that have different car usage patterns

# 4 Suggestion

Strength of the Business Model

## Benefit to KJ Rental

✓ Increase market share

✓ Reach more customers

✓ Earn regular incomes

## Benefit to Customers

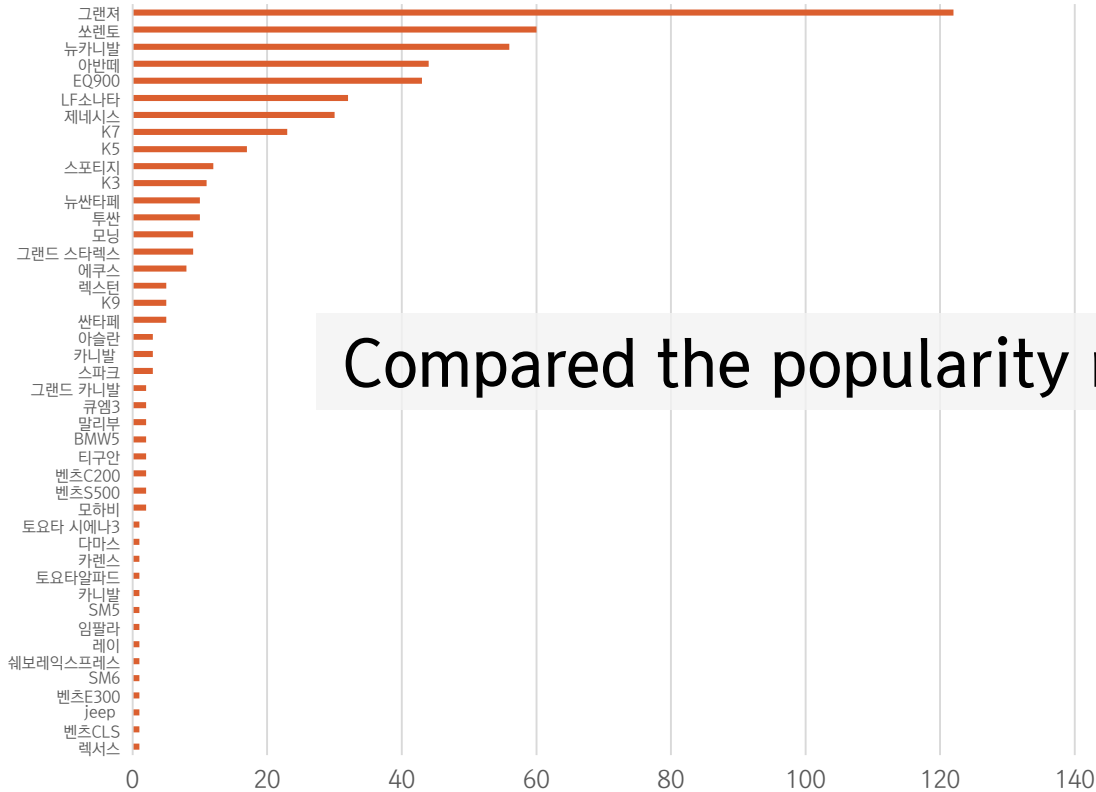

✓ Save costs

# 5 Data Modeling

## Future Demand Prediction Model

### Which Cars to Buy First?

보유차량 차종별 대여횟수

보유차종

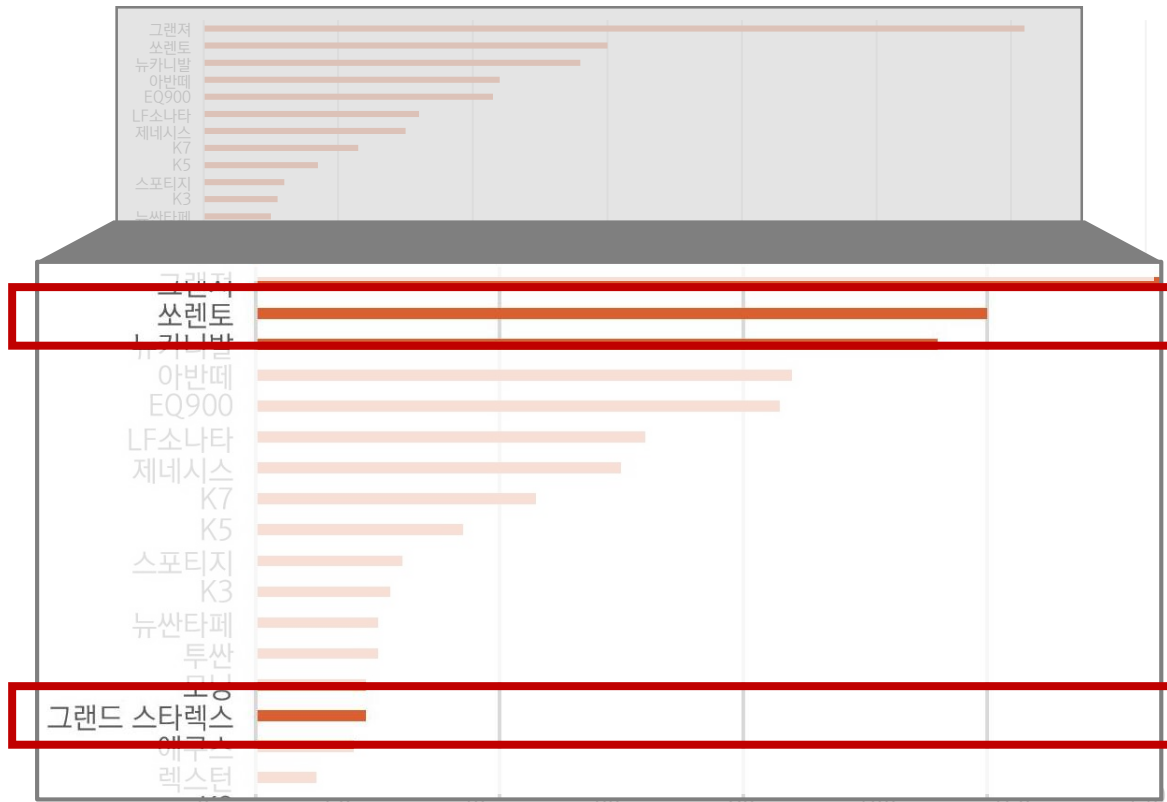

Compared the popularity ranking and holding ranking

# 5 Data Modeling

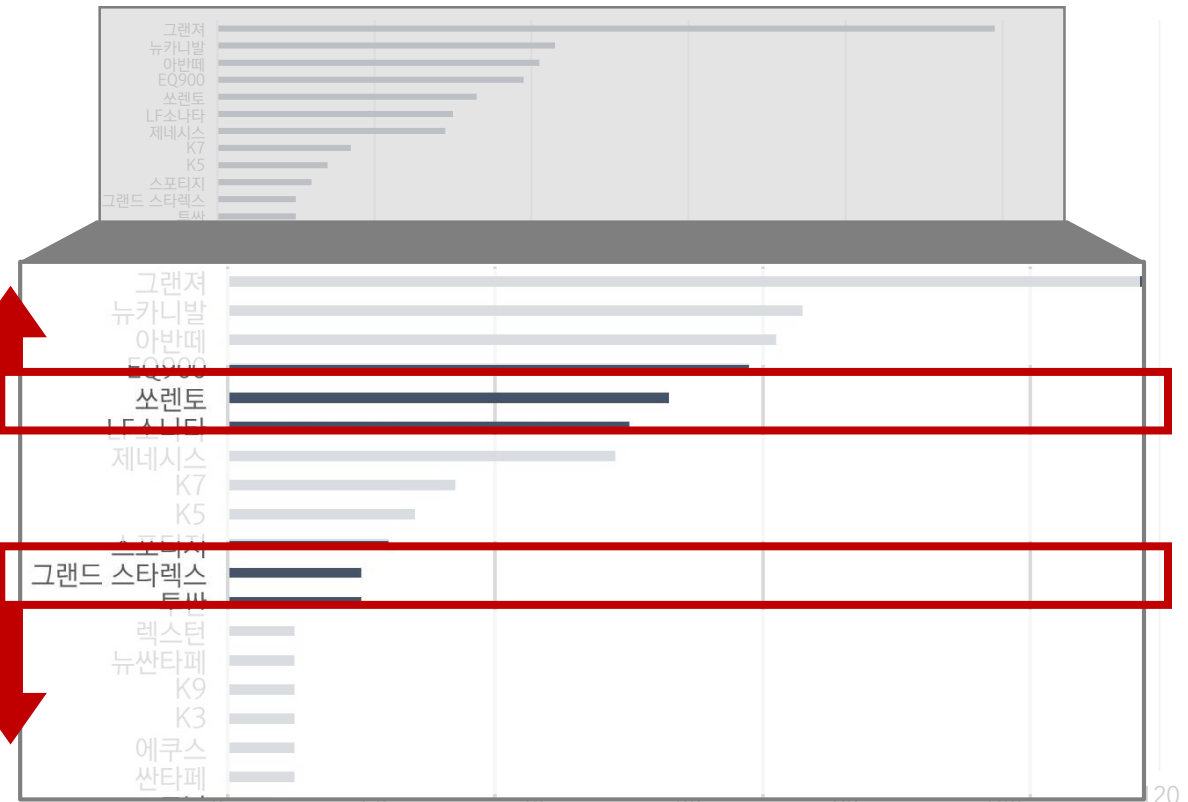

## Future Demand Prediction Model

### Which Cars to Buy First?

보유차량 차종별 대여횟수

보유차종

# 5 Data Modeling

Future Demand Prediction Model

Always able to book cars

Buying tons of cars?

**Inefficient**

# 5 Data Modeling

## Future Demand Prediction Model

How?

Step 1

- Collecting the Data

Step2

- Clustering the Companies with Their Car Use Pattern

Step3

- Classification – Train the Model

Step4

- Input New Company and Get the Predicted Car Use Pattern

# 5 Data Modeling

## Future Demand Prediction Model

### Step1) Collecting the Data

#### Hard To Gather The Real Car Use Data

Small companies tend not to datafy car usage

#### Datafication – Creating Sample Data

인테리어사업	서비스	인테리어	B2B	8	1	서울	영업
정수기 사업	서비스	정수기	B2B	11	1	서울	영업
커피머신사업	서비스	커피머신	B2B	12	1	서울	영업
인테리어사업	서비스	인테리어	B2C	9	1	서울	영업
정수기 사업	서비스	정수기	B2B	13	1	서울	영업
냉장고사업	서비스	패션유통	B2B	13	1	서울	영업
인테리어사업	서비스	인테리어	B2C	11	1	서울	영업
정수기 사업	서비스	정수기	B2B	9	1	서울	영업
냉장고사업	서비스	패션유통	B2B	10	1	서울	영업
인테리어사업	서비스	인테리어	B2C	10	1	서울	영업
정수기 사업	서비스	정수기	B2B	14	1	서울	영업
정수기 사업	서비스	정수기	B2B	16	1	서울	영업

## Step2) Clustering

## Clustering Result

# 5 Data Modeling

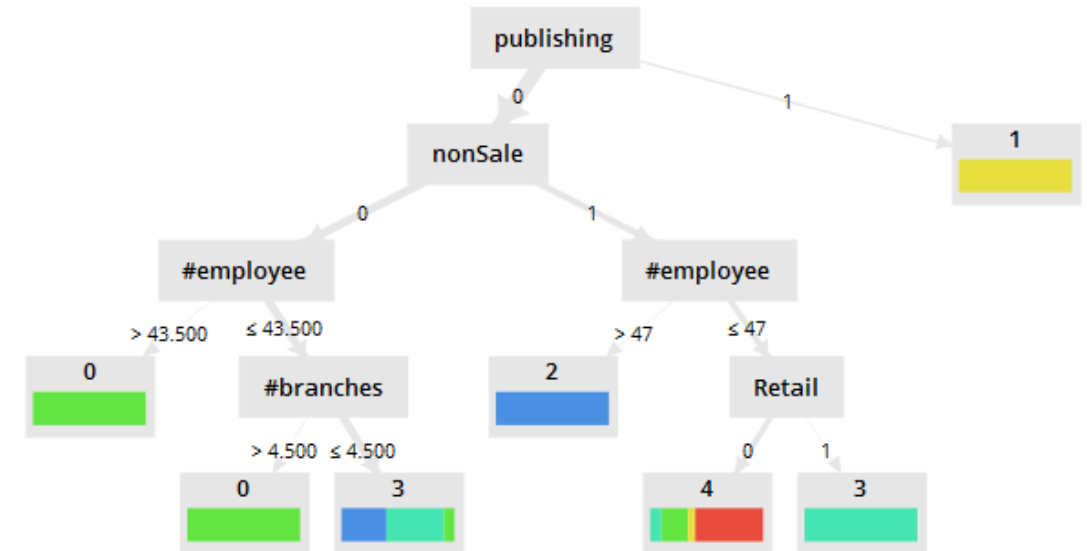

Future Demand Prediction Model

## Step3) Classification – Train Model

### Features of Companies

- ① The Customer(B2B, B2C)
- ② The Kinds Of Business  
(Service, Retail, Manufacturer, Livestock, Publishing)
- ③ The Goal Of Renting The Car  
(Sales, Non-sales)
- ④ The Number Of Employees
- ⑤ The Number Of Branches

### Classification Result

# 5 Data Modeling

## Future Demand Prediction Model

## Step4) Input New Company And Get The Predicted Car Use Pattern

## Input: Company A Data

## Return: Predicted Car Usage Pattern

- ① The Customer(B2B, B2C)
- ② The Kinds Of Business  
(Service, Retail, Manufacturer, Livestock, Publishing)
- ③ The Goal Of Renting The Car  
(Sales, Non-sales)
- ④ The Number Of Employees: 19
- ⑤ The Number Of Branches: 1
